

Introduction

The Requirements Engineering (RE) Quick Check is designed to provide RE practitioners with a simple tool to assess the status quo of their requirements handling practices in their software development projects with other organisations. This survey consists of questions about demographic information, methods and techniques used, and processes in the participant's workspace. After answering the survey, you have the possibility to specify what kind of companies your answers should be compared to.

We envision that the Quick Check will enable RE practitioners to determine the status quo of their RE process and derive optimisation potentials from it.

Instructions

This Quick-Check is completely anonymous. Your information can neither be attributed to you nor to the organisation you work for. Please keep this in mind when answering the questions.

1. After reading the instructions press on the Let's go button to start the Quick-Check
 2. Please complete the Quick-Check by answering the questionnaire.
 3. After you have completed the questionnaire, you will automatically be redirected to the evaluation overview. The display of the evaluation results may require some processing. Do not close the page!
 4. When loading the page is finished, you will receive by default an overview of your answers compared to all other participants of the Quick-Check.
 5. To specify what kind of companies you want to be compared to, click on the filter symbol ▼ in the upper right corner.
Example: You only want to be compared with participants from the same sector and a RE team size smaller than 10. This is done by selecting the sector in the corresponding questions and the answers 1 to 5 and 6 to 10 for the question on team size.
 6. If the filters are applied, the visualisations will adapt and show only the participants that match your selection.
